

MINE DEWATERING SKID

TANK CAPACITY

5500 L / 1500 GAL.

CONVEYING CAPACITY

UP TO 500 USGPM

WORKING PRESSURE

UP TO 720 PSI

Custom-built Mine Dewatering Skids are designed for durability in the toughest mining environments. The progressive cavity pumps convey a variety of viscous liquids with solids with minimal maintenance. Due to the Mine Dewatering Skid's custom designs, they are applicable in a variety of markets such as precious metals and gemstones, limestone and chalk, dimension stone, rock salt and potash, as well as gravel and clay.

PROPERTIES AND BENEFITS

- Two SEEPEX progressive cavity pumps to accommodate high demands
- Self-contained unit, simply connect to power and external piping
- Temperature Sensing Elements (TSE) for dry run protection
- Radar level sensor for tank level monitoring
- Controls in a NEMA 4X SS enclosure
- Welding to ASME/AWS standards
- Minimal and easy maintenance
- Bi-directional skid design
